

Analysis: Why Zika, and other viruses, don't disprove God's goodness

August 14, 2018

It's been two years since Christian missionaries and aid workers in Zika-infested areas wrestled with whether to stay or go after the virus triggered an international public health emergency. Last week, the CDC released a new report indicating for the first time what happens as babies exposed to the Zika virus grow older—they may face problems when none presented at birth.

Seeing the most vulnerable in our society suffering so cruelly can raise questions about God's goodness. Anjeanette "AJ" Roberts, a microbiologist and scholar at Reasons to Believe, began thinking about these issues in graduate school.
